

# माध्यमिक राज्य मण्डल, मध्यप्रदेश, भोपाल

परीक्षार्थी द्वारा भरा जायें ↓

परीक्षा का विषय	विषय कोड	परीक्षा का माध्यम
<b>CHEMISTRY</b>	<b>2 2 0</b>	<b>ENGLISH</b>
स्टीकर तीर के निशान ↓ से मिलाकर लगायें		
उत्तर पुस्तिका का सरल क्रमांक - 321 -		<b>145216</b>
परीक्षार्थी का रोल नंबर		
अंकों में <b>2 2 1 3 3 2 3 3 9</b>		
शब्दों में <b>two two one three two three nine</b>		
नीचे दिये गये उदाहरण अनुसार लगायें		
उदाहरणार्थ	<b>1 1 2 4 3 9 5 6 8</b>	
	एक एक दो चार तीन नौ पाँच छः आठ	

क - पूरक उत्तर पुस्तिकाओं की संख्या अंकों में **५** शब्दों में **५**

ख - परीक्षार्थी का कक्ष क्रमांक **GALLERY**

ग - परीक्षा की दिनांक **28 02 2022**

परीक्षा का नाम एवं परीक्षा केन्द्र क्रमांक की मुद्रा

**हायर सेकेन्डरी परीक्षा**

केन्द्र क्रमांक-132080

पर्यवेक्षक का नाम एवं हस्ताक्षर

**guy**

केन्द्राध्यक्ष/सहायक केन्द्राध्यक्ष के हस्ताक्षर

**CB**

परीक्षक एवं उपमुख्य परीक्षक द्वारा भरा जायें ↓

प्रमाणित किया जाता है कि मूल्यांकन के समय पूरक उत्तर पुस्तिकाओं की संख्या उपरोक्तनुसार सही पाई होलो क्राफ्ट स्टीकर क्षतिग्रस्त नहीं पाया गया अन्दर के पृष्ठों के अनुरूप मुख्य पृष्ठ पर अंकों की प्रविष्टि अंकों का योग सही है।

निर्धारित मुद्रा : नाम, पदनाम, मोबाइल नंबर, परीक्षक क्रमांक एवं पदाकिंत संस्था के नोंस की मुद्रा लगाएं।

उप मुख्य परीक्षक के हस्ताक्षर एवं निर्धारित मुद्रा

**T. KHAN  
71V5569**

परीक्षक के हस्ताक्षर एवं निर्धारित मुद्रा

**Shikha Vishwakarma  
71V5432**

विशेष नोट :- सिलाई खुली हुई अथवा क्षतिग्रस्त उत्तर पुस्तिका को न तो पर्यवेक्षक वितरण करे और न ही छात्र उपयोग में ले। ऐसी उत्तर पुस्तिका में लिखे उत्तरों का मूल्यांकन नहीं किया जायेगा।

नोट :- "हायर सेकेन्डरी परीक्षा में केवल वाणिज्य संकाय के विषयों तथा हाईस्कूल परीक्षा में प्रायोगिक विषय को छोड़कर शेष विषयों हेतु नियमित एवं स्वाध्यायी छात्रों के लिये प्रश्न पत्र 100 अंकों का होगा किन्तु नियमित छात्रों को 100 अंक के प्राप्ताक का 80% अधिक स्वाध्यायी छात्रों को 100 अंक के प्राप्ताक ही अंकसूची में प्रदर्शित किये जायेंगे।"

प्रश्न

प्रश्न क्र.

Question-1

(i) Molecular ✓

(ii)  $\text{CsCl}$  ✓

(iii) Gelatine ✓

(iv)  $\text{Hg}_2\text{Cl}_2$  ✓

M

(v)  $\text{OF}_2$ 

F

(vi) Polyamide ✓

E

(vii) Seconal ✓

S

S

Question-2

(i) 7 ✓

(ii) directly proportional ✓

(iii) Peptization ✓

 $\text{Al}_2\text{S}_3$ (iv)  $\text{CaF}_2$  ✓ $\text{K}^+$ 

(v) Chlorine ✓

K

(vi) Tetrafluoro ethene ✓

प्रश्न क्र.

(vii) ~~Hypnotic~~

### Question-3

(i) Glass  $\Rightarrow$  Amorphous solid

(ii) Slag  $\Rightarrow$   $\text{CaSiO}_3$

iii) Square planar  $\Rightarrow$   $\text{XeF}_4$

(iv) Neutral ligand  $\Rightarrow$  CO

(v) Spirit of wine  $\Rightarrow$   $\text{C}_2\text{H}_5\text{OH}$

S (vi) Primary Amine  $\Rightarrow$   $\text{RNH}_2$

E (vii) Glucose  $\Rightarrow$   $\text{C}_6\text{H}_{12}\text{O}_6$

### Question-4

(i)  $K = Ae^{-\frac{E_a}{RT}}$

ii) Radon is used in therapy of cancer.

iii) Benzoin condensation

iv) Due to the absence of hydrogen on nitrogen atom.

प्रश्न क्र.

- (v) Keratin is present in hair, wool, silk.
- (vi) Ethene is the polymer of polythene
- (vii) Aspirin

### Question-5

M  
P  
B  
S  
E

We know that  
Molality is the number of moles of  
solute present in 1 kg solvent.

$$\therefore W_A = 1 \text{ kg}$$

[let A represent  
solvent B represent  
solute]

### Question-5 OR

Molarity  $\Rightarrow$  Molarity is the number of  
moles of solute dissolved in  
1 litre solution. It is denoted by  
M. Its unit is mol/l.

$M = \frac{\text{no. of moles of solute}}{\text{volume of solution in litre}}$

where, no. of moles =  $\frac{\text{mass of solute (g)}}{\text{molar mass of solute}}$

प्रश्न क्र.

Question-6 OR

Brownian Movement  $\Rightarrow$  When colloidal particles are seen under a high power ultra microscope, then particles of colloidal sol are seen to be moving in zig-zag path in all possible directions. It was discovered by Robert Brown, hence it is called as Brownian motion or movement. It is produced due to collision of dispersion medium particles to dispersed phase particles.

**P  
B****S**Question-7 OR

Sulphur exists as  $S_8$  molecules, so it has a puckered giant structure and there is strong covalent bond between the molecules of sulphur, so it exists in solid state.

P.T.O.

प्रश्न क्र.

Question-8 OR

Noble gases are inert because their orbitals are completely filled electrons and all electrons are paired so they have no tendency to gain the electron. They have very high ionisation energy, it is hard to lose electron from noble gases. So they can neither lose nor gain the electron. Hence they are inert.

M

P

B

S

E

Question-9

Double salt

Complex compound

1. They are stable only in solid state when they are dissolved in aqueous solution they completely breaks up.

1. They are stable in both solid as well as in aqueous solution.

2. Their physical and chemical properties are similar to their constituents.

2. Their Physical and chemical properties are changed.

प्रश्न क्र.

Question-10

Primary amine  $\Rightarrow$   $\text{CH}_3-\text{NH}_2$

N-methyl amine

Secondary amine  $\Rightarrow$   $\begin{matrix} \text{CH}_3 \\ | \\ \text{CH}_3-\text{NH} \end{matrix}$

$\text{N},\text{N}$ -Dimethyl amine

Question-11 OR

M

DNA

RNA

P  
B

1. It has deoxyribose sugar.

1. It has ribose sugar.

S  
E

2. It is involved in inheritance of character from one generation to other.

2. It is not involved in inheritance of character. It is responsible for protein synthesis.

Question-12

Antibiotics  $\Rightarrow$  Penicillin, streptomycin.

प्रश्न क्र.

## Question - 13

Given,

$$\text{Mass of solute, } w_B = 5.85 \text{ gm}$$

$$\text{Mass of solvent, } w_A = 250 \text{ gm}$$

$$\text{Molecular mass of solute, } M_B = 23 + 35.5$$

$$(NaCl) = 58.5 \text{ g/mol}$$

$$= 58.5 \text{ g/mol}$$

$$M = \frac{w_B}{M_B} \times \frac{1000}{w_A}$$

$$m = \frac{5.85}{58.5} \times \frac{1000}{250}$$

$$m = \frac{585}{5850} \times 4$$

$$m = 0.4 \text{ mol/kg}$$

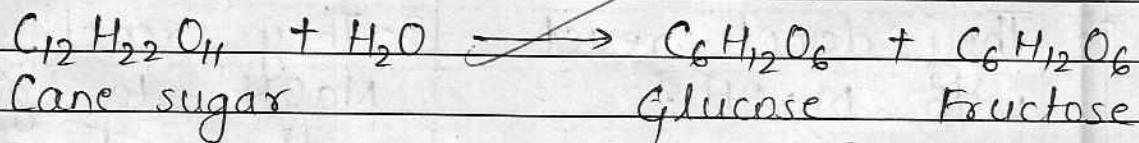

Question - 14      OR

Pseudo Order Reaction  $\Rightarrow$  Those reactions in which the order of reaction is different as calculated by rate law prepared by using law of mass action is called as pseudo order reactions.

## Example - Hydrolysis of Cane sugar

M

B

~~According to law of mass action~~

S

$$r = k [C_{12}H_{22}O_{11}] [H_2O]$$

E

Here order of reaction seems to be two  
But actually,

$$\gamma = K [C_{12}H_{22}O_{11}] [H_2O]^b$$

$\therefore$  Order of reaction = 1

प्रश्न क्र.

Question - 15Or

Alcohol

Phenol

1. It has no effect  
on litmus paper.  
(neutral nature)

Ques.

2. It has alcoholic  
odour.

1. It turns blue  
litmus to red.  
(acidic nature)

Ques.

2. It has specific  
phenolic odour.

M

P

B

S

E

3. They donot react  
with NaOH.

3. They react with  
NaOH to give  
sodium phenoxide  
(salt) and water.

EDUCATIONAL BOARD, SECONDARY EDUCATION

## question -16

(i)  $\text{CH}_3\text{CH}(\text{CH}_3)\text{CH}_2\text{CH}_2\text{CHO}$

## 4-methyl pentanal

$$\text{CH}_3\text{CH}=\text{CHCHO}$$

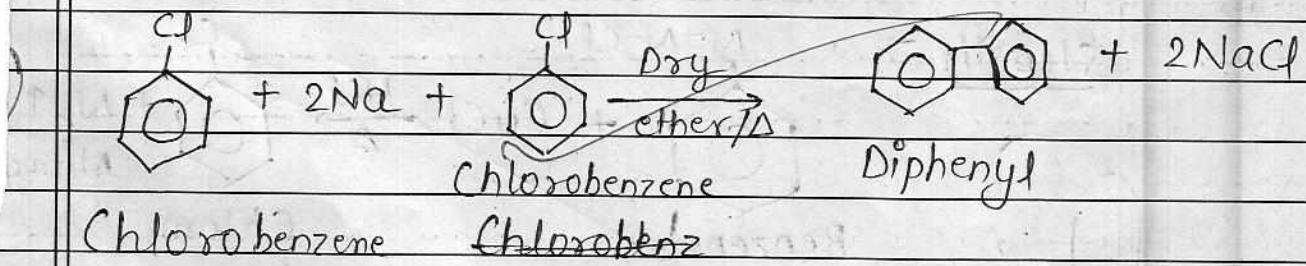

~~But-2-enal~~

$$\text{M}^{(ii)} \text{ } (\text{CH}_3)_3\text{C } \text{CH}_2\text{COOH}$$

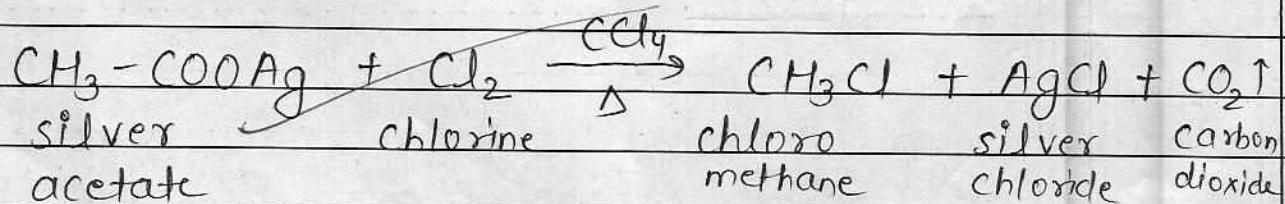

**P** ~~3,3-Dimethyl Butanoic acid~~

B  
S  
E

## ① Fittig Reaction -

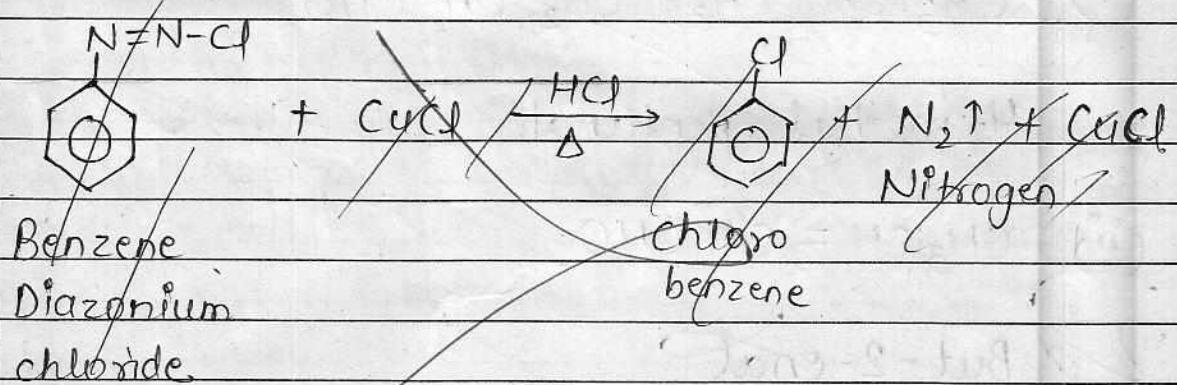

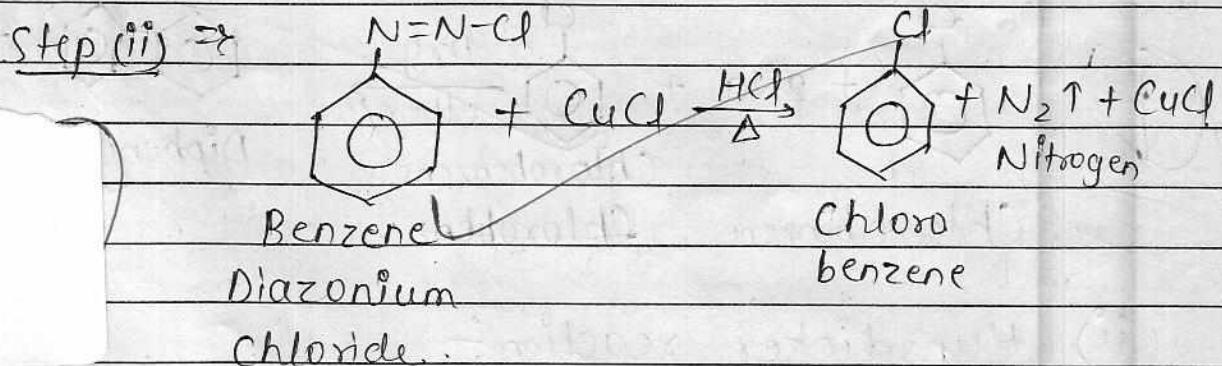

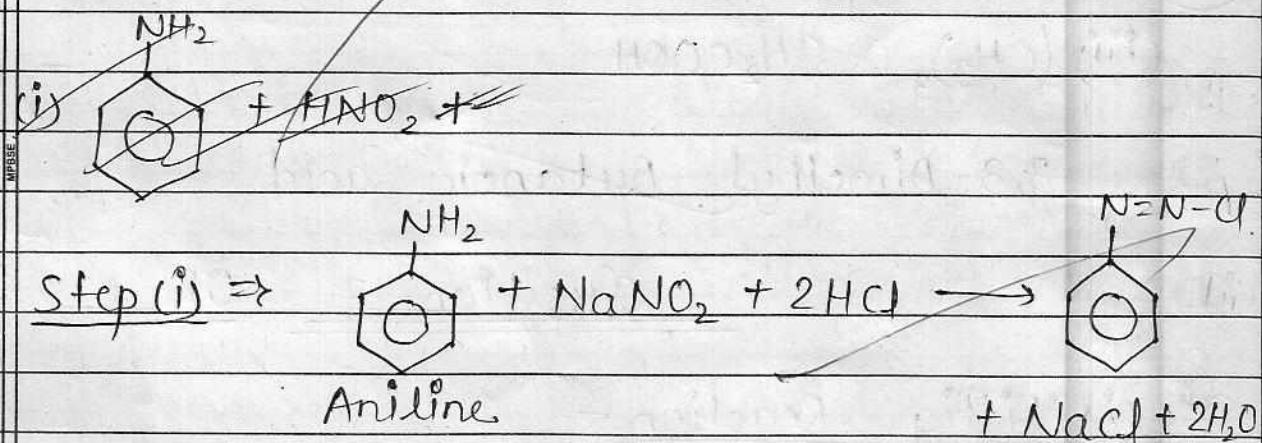

(ii) Hunsdicker reaction:

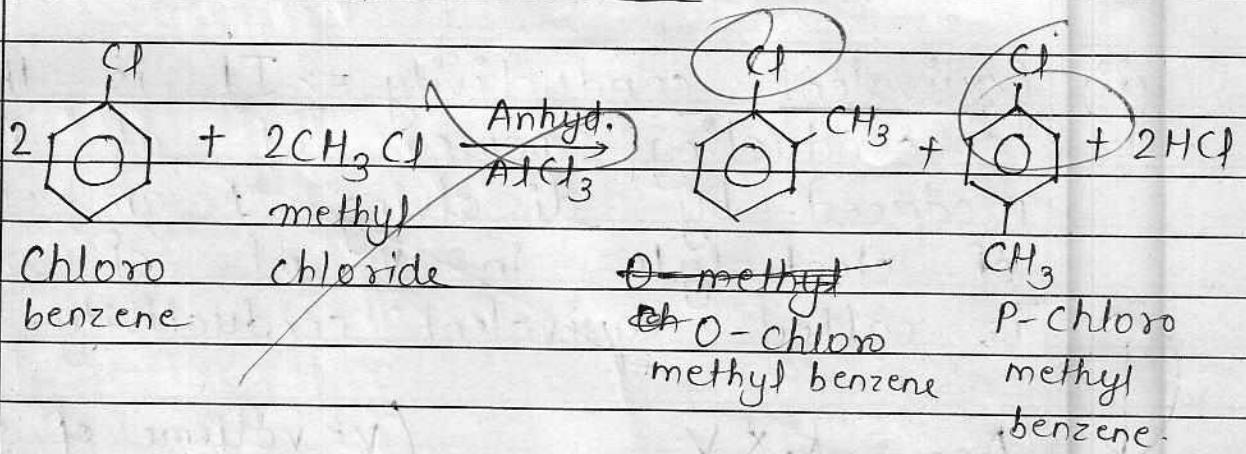

प्रश्न क्र.

(iii) Sandmeyer's reaction -M  
P  
B  
S  
E

13

प्रश्न क्र.

(iv) Friedel Crafts reaction  $\Rightarrow$ 

M

Question-18 OR

P (i) ~~Specified specific conductivity  $\Rightarrow$  It is reciprocal of specific resistance. It is denoted by  $k$  (kappa).~~

B

$$k = \frac{1}{\rho}$$

$$\therefore \rho = \frac{Ra}{l}$$

S

$$k = \frac{l}{Ra}$$

$$\text{if } l = 1 \text{ cm}$$

$$a = 1 \text{ cm}^2$$

$$k = \frac{1}{R} = G$$

It is the conductance of a conductor having 1 cm length and 1 cm<sup>2</sup> area of cross section. In case of electrolyte it is the conductance of 1 ml electrolyte.

प्रश्न क्र.

$$\text{Unit} \Rightarrow CGS = \Omega^{-1} \text{ cm}^{-1}$$

$$SI = \Omega^{-1} \text{ m}^{-1}$$

(iii) Equivalent conductivity  $\Rightarrow \Lambda_f$  is the conducting power of all ions produced by dissolving 1 gm-equivalent of electrolyte in V ml of solution, is called equivalent conductivity.

$$\Lambda_{eq} = k \times V$$

(V = volume of solution)  
(k = specific conductivity)

M

$$\text{or } \Lambda_{eq} = \frac{k \times 100}{N}$$

(Unit - CGS -  $\Omega^{-1} \text{ cm}^2 \text{ eq}^{-1}$ )  
(SI -  $\Omega^{-1} \text{ m}^2 \text{ eq}^{-1}$ )

P

B

S

E

M

(iii) Molar conductivity  $\Rightarrow \Lambda_f$  is the conducting power of all ions produced by dissolving 1 mole of electrolyte in V ml of solution, is called as Molar conductivity. It is denoted by  $\Lambda_m$ .

$$\Lambda_m = k \times V$$

(V = Volume of solution)  
(k = specific conductivity)

or

$$\Lambda_m = \frac{k \times 100}{M}$$

$$\text{Unit} = CGS - \Omega^{-1} \text{ cm}^2 \text{ mol}^{-1}$$

$$SI - \Omega^{-1} \text{ m}^2 \text{ mol}^{-1}$$

प्रश्न क्र.

(iv) Cell constant  $\Rightarrow$  In electrolytic cell, the distance between electrodes is denoted by [l] and area of cross section by [a]. The ratio  $l/a$  is always constant for a particular electrolytic cell, it is called as cell constant. It is denoted by  $G^*$

$$G^* = \frac{l}{a}$$

**M  
P**

$$\text{Unit} = \text{CGS} = \text{cm}^{-1}$$

$$\text{SI} = \text{m}^{-1}$$

**B  
S**

(v) Specific resistance  $\Rightarrow$  It is the resistance of 1 cm<sup>3</sup> of material.

**E**

we know that

$$R = \frac{sl}{a}$$

if  $l = 1 \text{ cm}$

$$a = 1 \text{ cm}^2$$

$$R = s \quad \text{or} \quad s = R$$

It is the resistance of a conductor having 1 cm length and 1 cm<sup>2</sup> area of cross section of conductor. It is called as specific resistance. Its units in CGS is  $\Omega \text{ cm}$  and in SI -  $\Omega \text{ m}$ .

प्रश्न क्र.

Question-19LanthanoidsActinoids

1. Their last electron enters in ~~4F~~ orbital.

1. Their last electron enters in ~~5F~~ orbital.

2. Their general electronic configuration is  $6s^2 4f^{1-4} 5d^{0-1}$ .

2. Their general electronic configuration is  $7s^2 5f^{1-4} 6d^{0-1}$

**M**

3. They are not radioactive in nature.  
(except Pm)

3. They are radioactive in nature.

**P****B**

4. They occur in nature. 4. Except Th, Pa, U  
all are <sup>artificial</sup> radioactive.

They are less basic in nature.

5. They are more basic in nature.

not a good question
